Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 81-82, 84-91, 93-96 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boucher et al. (6,716,216).

With respect to the claims, Boucher et al disclose a kit of parts for sealably introducing fluent material directly into the disc space through an opening extending through the annulus fibrosis of the disc, comprising a tube (84,160) having a passageway (162) for the flow of fluent material (62) therethrough and an extend (160) adapted to be received in the opening of the annulus fibrosis, the tube having a seal (22) adapted to engage the annulus fibrosis adjacent the opening and to form a fluid-tight seal therewith, wherein the tube extend is defined by a distal tip of the tube, the distal tip being sized and configured to provide distraction of opposed vertebrae communicating with the disc space; and a quantity of curable fluent material (62) adapted to be introduced in a fluid state into the disc space through the passageway of the tube, the material upon curing having the properties substitutive of the nucleus pulposus, The seal is integral with the tube (84) and separable from the extend (160), the distal tip having at least one orifice (162), the distal tip is removable from the tube; there are a plurality of distal tips (120,160,164), a syringe (112).

With regard to the recitation that an element is "adapted to" or "configured to", it is noted that it has been held the recitation that an element is "adapted to" or "configured to" perform a function is not a positive limitation but requires the ability to so perform. It does not constitute a limitation in any patentable sense. Therefore, the distal tip of Boucher et al is sized and configured (tapered) to fully capable of distracting opposed vertebrae.

### ***Response to Amendment***

Applicant's arguments, see Remarks, filed 10/24/08, with respect to the rejection(s) of claim(s) 81, 82, 84-91, 93-96 under 102 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Boucher et al. Applicant's declaration to overcome the reference to Mathews, has been considered and noted by the examiner.

### ***Conclusion***

A shortened statutory period for reply to this action is set to expire THREE MONTHS from the mailing date of this action.
